

Whole-protein versus domain ancestral estimates

Known descendants in both contexts No known descendants at domain position

A All matched-coordinate comparisons

B High-confidence conflicts by local coverage

13 families; 624 fit pairs; 269,154 dependent ancestor/site comparisons. Labels in A are changed/compared counts.
The 104 high-confidence conflicts represent three exact coordinate sets across five ancestral nodes.
Observed descendant coverage does not establish ancestral residue presence; indel uncertainty remains unresolved.
